

Multilin™ EPM 7100

Energy and Demand Submeter with Data Logging and Wi-Fi

The EPM 7100 is a powerful tool that allows customers to monitor and manage their energy usage within factories, businesses and across campuses. The EPM 7100 is a multifunction meter that features ANSI C12.20 (0.2% class) accuracy and RS485, RJ45 Ethernet or IEEE 802.11 WiFi communication connections, making the meter easy to deploy in modern and older communications systems.

The EPM7100 features extensive data logging and alarm recording capabilities, enabling advanced analysis and predictive maintenance of the power system.

Key Benefits

- Flexible WiFi option eliminates the need for expensive wiring
- 0.2% accurate revenue class meter provides highly reliable measurements
- Extensive data logging and alarm recording allows for predictive maintenance and performance analysis (EPM 7100)
- Multifunction capability allows for a variety of voltage, current, and energy metering measurements
- Direct interface with most building management systems reduces integration costs
- Easy installation reduces setup time and costs
- Energy monitoring to increase OEMs efficiency

Applications

- Allocate energy usage throughout multi-tenant settings, such as industrial and university campuses, office towers, apartment complexes and shopping centers
- Submetering in Government, military and airport facilities

Monitoring & Metering

- Current: Ia Ib Ic In
- Voltage: Va Vb Vc Vab Vbc Vca
- Frequency: Hz W VAR VA
- Reactive Power: Wh VARh Vah
- Demand: W VAR VA
- 2MB of Data Logging Capacity
- Power Factor
- Voltage and Current Angles
- Bright Red LED Display with Three .56" Lines
- % of Load Bar for Analog Meter Perception

Communications

- Standard RS485 Modbus (Modbus RTU or ASCII)
- IrDA Port
- Optional Ethernet 10.100BaseT or WiFi
- Intuitive Faceplate Programming

Overview

The EPM 7100 is a powerful tool that allows customers to monitor and manage their energy usage within factories, businesses and across campuses. The EPM 7100 is a multifunction meter that features ANSI C12.20 (0.2% class) accuracy and RS485, RJ45 Ethernet or IEEE 802.11 WiFi communication connections, making the meter easy to deploy in modern and older communications systems. The extensive data logging and alarm recording capabilities of the EPM 7100 enable advanced analysis and predictive maintenance of the power system. The units use standard 5 or 1 amp CTs (either split or donut), surface mount to any wall and are easily programmed in minutes.

Monitoring and Metering

Traceable Watt-Hour Test Pulse for Accuracy Certification

To be certified for revenue metering, power providers and utility companies need to know that the billing energy meter will perform to its stated accuracy. To verify the meter's performance and calibration, power providers use field test standards to ensure that the unit's

energy measurements are correct. Since the EPM 7100 submeters are traceable revenue meters, they contain a utility grade test pulse allowing power providers to verify and confirm that the meters are performing to their rated accuracy. This is an essential feature required in all billing grade meters.

Utility Peak Demand Metering

EPM 7100 submeters provide user-configured Block Window or Rolling Window Demand. This allows you to set up a particular utility demand profile. Block Window Demand is demand used over a fixed user-configured demand period (usually 5, 15 or 30 minutes). Rolling Window Demand is a fixed window demand that moves for a user specified sub-interval period. An example is a 15 minute demand using 3 subintervals, providing a new demand reading every 5 minutes based on the last 15 minutes. Readings for kW, kVAR, KVA and PF are calculated using utility demand structures. Other parameters offer max and min capability over the user-selectable averaging period. Voltage provides a non-rolling instantaneous max and min reading, displaying the highest surge and lowest sag seen by the meter.

Communications

Standard Modbus RS485 Communication

Standard communication includes an RS485 output speaking Modbus protocol. This allows the unit to be connected to any serial RS485 bus using the Modbus interface. The unit communicates easily with most building automation or other software systems. Baud rates are up to 57.6K baud to provide fast update times.

WiFi or LAN-Based Ethernet

The unit offers two Ethernet options — either an RJ45 or WiFi connection. The WiFi option allows the EPM 7100 submeter to be used on standard WiFi base stations.

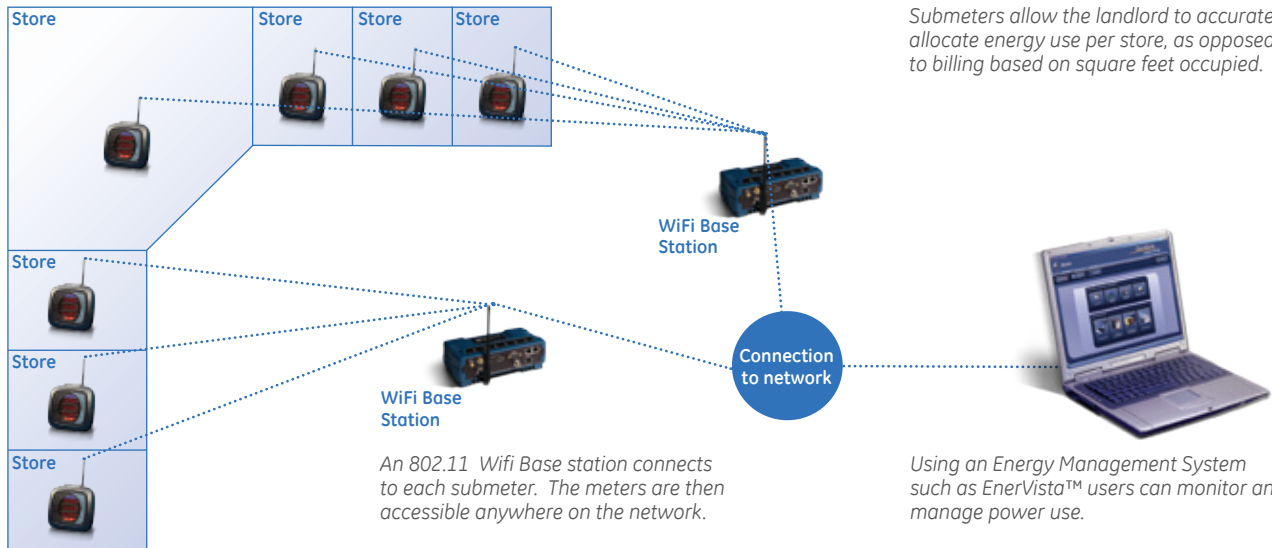

IrDA Port

Use an IrDA-equipped laptop PC to program and read the EPM 7100 submeter.

KYZ Pulse

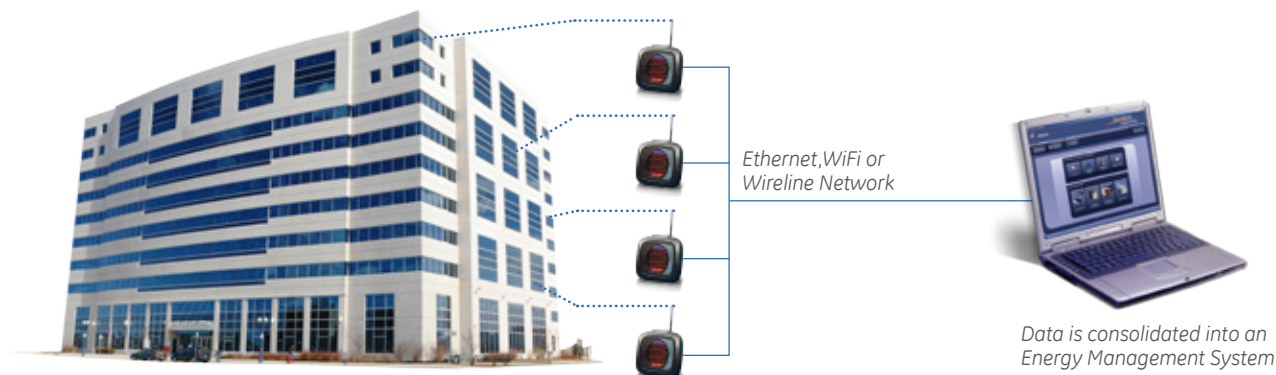

For applications in which a pulse is needed, the unit also provides a KYZ output which pulses proportional to the amount of energy consumed. This feature is used for pulse counting applications or for building management systems where serial or Ethernet protocol is not available.

Shopping Mall or Commercial Application of EPM 7100

EPM 7100 Deployed within an Office Tower

EPM 7100 meters deployed within an office tower to monitor individual tenants. EPM 7100 can be deployed in buildings with multiple tenants to accurately allocate energy costs to specific leases or circuits.

EPM 7100 Advanced Logging Features

Extensive Data Logging Capability

The EPM 7100 submeter has 2 Megabytes of Flash memory that give it extensive data logging capability. The EPM 7100 offers three historical logs, a limits (alarm) log and a system events log. The unit has a real-time clock that allows for time-stamping of all the data in the instrument when log events are created.

Historical Logs

Each of the three historical logs can be programmed with unique parameters consisting of any measured reading. Up to 64 parameters can be recorded per log.

Limits (Alarm) Log

The limits log provides magnitude and duration of an event. 2,048 events are available; the log provides time-stamp and alarm value.

System Events (Anti-Tampering) Log

To protect critical billing information, the meter records and logs the following with a time stamp:

- Demand/energy/log resets
- Password requests
- System startup
- Log reads
- Changes to meter's programmable settings

EPM 7100 Accuracy

MEASURED VALUES	ACCURACY
Voltage L-N	0.1% of Reading
Voltage L-L	0.1% of Reading
Current	0.1% of Reading
+/- Watts	0.2% of Reading
+/- Wh	0.2% of Reading
+/- VARs	0.2% of Reading
+/- VARh	0.2% of Reading
VA	0.2% of Reading
VAh	0.2% of Reading
PF	0.2% of Reading
Frequency	0.03Hz
Load Bar	+/- 1 Segment

Measured Values

The EPM 7100 measures the following values:

MEASURED VALUES	REAL-TIME	AVG	MAX	MIN

EnerVista™ Software

EnerVista Launchpad

EnerVista Launchpad is a powerful software package that provides users a platform to access all of the setup and support tools needed for configuring and maintaining GE Multilin products.

EnerVista Launchpad allows configuration of devices in real-time by communicating using RS232, RS485, Ethernet or modem connections. Using Launchpad as the single interface to the setup and analysis software makes it easy to enter set points, read metered values, monitor status and evaluate power quality.

Included in EnerVista Launchpad is a document archiving and management system that ensures critical documentation is up-to-date and available when needed by automatically checking for and downloading new versions of manuals, applications notes, specifications and service bulletins.

EnerVista Integrator

EnerVista Integrator is a toolkit that allows seamless integration of GE Multilin devices into new or existing automation systems by sending GE device data to HMI, DCS and SCADA systems. Included in EnerVista Integrator is:

- OPC/DDE Server
- GE Multilin Drivers
- Automatic Event Retrieval
- Automatic Waveform Retrieval

Dimensions and Mounting

User Interface

Technical Specifications

VOLTAGE INPUTS

- 20-576 Volts Line to Neutral
- 0-721 Volts Line to Line
- Universal Voltage Input
- Input Withstand Capability – Meets IEEE C37.90.1 (Surge Withstand Capability)
- Programmable Voltage Range to Any PT Ratio
- Supports: 3 Element WYE, 2.5 Element WYE, 2 Element Delta, 4 Wire Delta Systems
- Burden: 0.36VA per Phase Max at 600V, 0.014VA at 120 Volts

CURRENT INPUTS

- Class 10: 5 Amp Nominal, 10 Amp Maximum
- Class 2: 1 Amp Nominal, 2 Amp Secondary
- Programmable Current to Any CT Ratio
- Burden 0.005VA per Phase Max at 11Amps
- 5mA Pickup Current for Class 10
- 1mA Pickup Current for Class 2
- Current Surge Withstand: 100A/10 Seconds at 23°C

ISOLATION

All Inputs and Outputs are galvanically isolated to 2500 Volts AC

ENVIRONMENTAL RATING

- Storage: -20 to +70°C
- Operating: -20 to +70°C
- Humidity: to 95% RH (Non-condensing)

SENSING METHOD

- RMS
- Sampling at 400+ Samples per cycle on all channels measured readings simultaneously

UPDATE RATE

- Watts, VAR and VA - Every 6 cycles (e.g., 100ms @ 60Hz)
- All other parameters – Every 60 cycles (e.g., 1s @ 60Hz) (1 second for Current Only measurement, if reference voltage is not available)

POWER SUPPLY

- (90 to 400) Volts AC and (100 to 370) Volts DC. Universal AC/DC Supply
- Burden: 16VA max.

COMMUNICATION FORMAT

- 2 Com Ports
- RS485 Port
- IrDA (Through Faceplate)
- Protocol Modbus RTU, Modbus ASCII
- Com Port Baud Rate: (9600 to 57,600)
- Com Port Address: 0-247
- 8 Bit, No Parity
- Modbus RTU or ASCII Protocols

ETHERNET

- 802.11b Wireless
- 10/100BaseT Ethernet (RJ45)
- Modbus TCP Protocol

DIMENSIONS AND SHIPPING

- Weight: 4 lbs
- 7.9H x 7.5W x 3.1D in
- 20.1H x 19.1W x 7.9D cm

COMPLIANCE:

- IEC 687 (0.2% Accuracy)
- ANSI C12.20 (0.2% Accuracy)
- ANSI (IEEE) C37.90.1 Surge Withstand
- ANSI C62.41 – Burst
- IEC1000-4-2 – ESD
- IEC1000-4-3 – Radiated Immunity
- IEC 1000-4-4 – Fast Transient
- IEC 1000-4-5 – Surge Immunity
- UL Listed on E250818

Ordering

PL7100	*	*	*	*	*	Description
Frequency	5 6					Standard Unit with display. All current/voltage/power/energy counters measurement, % load bar, RS485 and IrDA ports and one front test pulse output. 2 MB of data logging memory. 50 Hz AC Frequency System 60 Hz AC Frequency System
Current Inputs		5A 1A				5 Amps 1 Amp
Software			B			Multifunction Meter with 2MB Data Logging
Power Supply				HI		90-400 VAC / 100-370 VDC
