ALPS-PC VERSION: 6.0
FEATURES

- **NOTES:** If you are required to remove an existing installation of ALPS-PC, do the following:
- o Click on the "Start" button in the lower left corner of the screen
- o Select the "Settings" item
- o Select the "Control Panel" item
- o Double click the "Add/Remove Programs" icon/selection
- o Select the "ALPS PC" icon/selection
- o Click on the "Remove" button

This removes the previous installation of ALPS-PC. Now rerun the ALPS-PC installation file to install the new version of ALPS-PC.

ALPS PC 6.0 has the following applications embedded in it:
- ALPS Link 6.0
- Xpression Builder 6.0
- ALPS SET 6.0
- Download 6.0 (Firmware Download utility)

A COMTRADE Oscillography viewer is also installed as part of ALPS PC programs.

Apart from embedding the above-mentioned applications into single package, the ALPS PC 6.0 comes with following features:
- Feature to Calibrate the Relay (available from Actions menu of ALPS LINK)
- Single File for both Settings and configurable logic. The extension for the files generated would be .as.
- Communications Status Window which monitors the activity on the serial port and presents in hexadecimal format and GEMODEM decoded format
- A utility to convert .osc files to either COMTRADE or DAFF format (Available from Convert Osc menu of ALPS PC main menu)
-
